

PRO-MIC Update

PRO-MIC Maintenance Options

How long will my PRO-MIC last? ...is a question we hear pretty often. The truth is, we don't know. The original PRO-MICs, built in 1985 are still in use. (That's 20 years and tens of thousands of profiles.)

Maintenance is a big part of keeping the accuracy and dependability of your PRO-MIC throughout its lifetime.

Here are some options to consider:

Routine Maintenance

Ordinarily, PRO-MIC Systems are returned to our shop for repair and calibration at 6 or 12 month intervals.

We return the system to "as new" condition - and prove it by conducting a repeatability study of the whole system on our test roll before returning it to you.

This way, you know it is ready to return to service in your shop.

Short Term Rentals

If you can't be without your PRO-MIC...

You may be glad to know we maintain a fleet of 20 rental systems of various sizes and configurations.

These units are available as short term maintenance rental systems to keep your shop in action while your PRO-MIC is serviced.

On Site Maintenance

On-site maintenance by PRO-MIC technicians enables PRO-MIC users with multiple systems to have all of their equipment serviced at one time.

Our technicians travel to your shop with all the tools and parts they can carry. Your PRO-MICs are repaired and calibrated and put back in use immediately.

Partial System Repairs

A less known fact is that we often service the electronic portion of the system on its own - a quick calibration or repair.

We can also remanufacture an old mechanical assembly so that it looks and acts like new.

PRO-MICs are well built and will last a long time if they are cared for.

Printing Options

All PRO-MICs with serial numbers above 2000 are now able to communicate with low cost and durable HP LaserJet printers.

We offer the LaserJet 1200 as an option for new systems because of its printing speed and low cost.

Call us, and we'll let you know what upgrades (if any) your system needs to go with a LaserJet.

PRO-MIC Cabinet

We are happy to offer a great way to store your PRO-MIC and keep it safe from dust and debris.

We recommend a fabricated steel cabinet from McMaster Carr Supply Company - we'll be happy to let you know which part number to order.

We supply a reasonably priced, custom tray that is built to hold your PRO-MIC.

If your PRO-MIC could use a safer home, give us a call.
